

**TTX660**  
6-CHANNEL 2.4GHz SPREAD SPECTRUM RADIO SYSTEM

## ***TECHNICAL NOTICE***

### **Applies to Firmware Versions Prior to Version 2.005**

Tactic TTX660 computer transmitters prior to firmware version 2.005 have a programming error. The error causes the assigned switch for CH5 and CH6 to be non-functional after the transmitter power has been cycled. The switch function can be restored by re-assigning the switch in the CH5 and CH6 *set menu* option. This error does not affect any other function in the transmitter.

If your TTX660 does not exhibit this problem or this error would not affect your use of the TTX660, then no action needs to be taken. If your radio exhibits this error and you would like this issue corrected, you will need to ship your TTX660 to the Horizon Service Center for a firmware update.

**NOTE:** This firmware update is only for the TTX660 Transmitter. The update does not add any additional features to the transmitter or change any other existing functions. This update is only for the purpose of correcting the switch assignment error for CH5 and CH6.

**For the firmware update please ship your TTX660 transmitter to:**

**Horizon Service Center**

**2904 Research Rd.**

**Champaign, Illinois 61822**

The transmitter can be shipped in the original packaging or a sturdy box with adequate padding to ensure the transmitter will not become damaged during shipping. Please include documentation with the transmitter indicating your need for this firmware update, and your return shipping information. When received, the transmitter will be promptly serviced and returned to you. The firmware update and return shipping is a no-cost service, so no payment needs to be included.
